Proper Depth is Important in Planting

Peony Species

Species and Hybrids will give you a month more of Peony bloom, as they will all bloom from 10 days to 30 days before the Chinensis varieties. All have unusual foliage, color of bloom and are all low growers making them ideal for border plantings. You'll enjoy having some or all of them in your garden.

PEONIES

This type of Peony is very graceful in growth and quite different in type of flower. The flowers are single or semi-double with wide flaring petals of exquisite coloring and texture. The centers are usually a more or less compact mass of tiny petaloids, usually a color contrasting with the main petal color. Very charming color effects are found among them. Ideal for flower arrangements.

Single PEONIES

Pride of Langport

Somewhat like the Japanese Peony except center has a cushion of yellow stamens instead of petaloïds. The singles open 3 to 5 days earlier than the doubles or Japanese types. As a class they are very graceful plants, holding their blooms well off the ground without support and offering very handsome subjects for flower arrangements as well as garden effect. This type of Peony is recommended for the South as it opens more freely than the Double-flowering Peony.
